(54) DIGITAL CAMERA

(57)Abstract:

PURPOSE: To provide a digital camera capable of recording image data while suitably switching a recording medium corresponding to the state of the power source voltage of the camera.

CONSTITUTION: When the power source voltage of the camera is smaller than a prescribed value, a recording area for recording photographed image data is switched from a recording medium 2 to an internal memory 11. Each time the power source voltage of the camera gets smaller than a switching voltage value for each of plural recording media 2, a transfer area for transferring the image data in the internal memory 11 is switched to the recording medium 2 of the low switching voltage value. Each time the power source voltage of the camera gets smaller than a switching voltage value X of the transfer area for each of plural recording media 2, the transfer area for transferring the image data in the internal memory 11 is switched to the recording medium 10 of the low switching voltage value X.
